

Weld Defect Classification Using Deep Neural Network

Ante Sokosa

June 8, 2023

Dimitrios Fafalis, PhD

MEM T380 - Applied ML in ME

Problem & Approach

radiographic
images

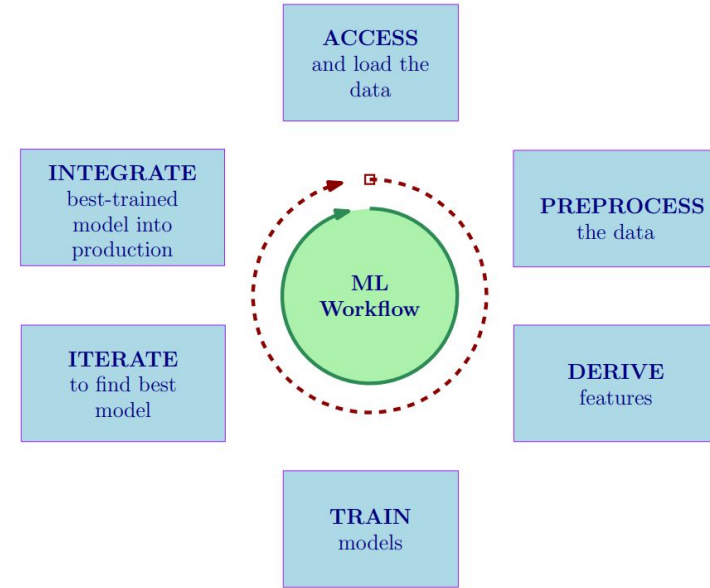

Figure 1: Workflow of ML modeling. [2]

Data Preparation

- Combine subsets

`pd.concat`

Features

- Standardize

`StandardScaler()`

Target

- One-hot encode

`pd.get_dummies`

ACCESS
and load the
data

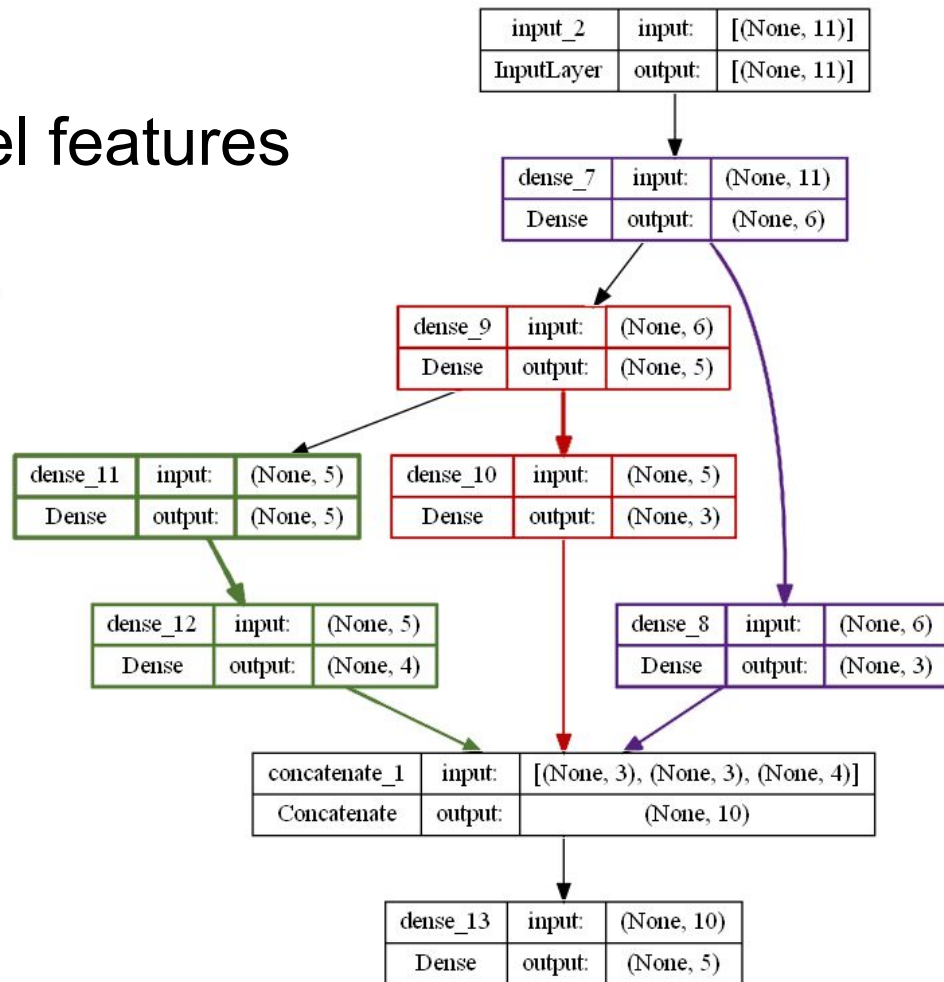

PREPROCESS
the data

DERIVE
features

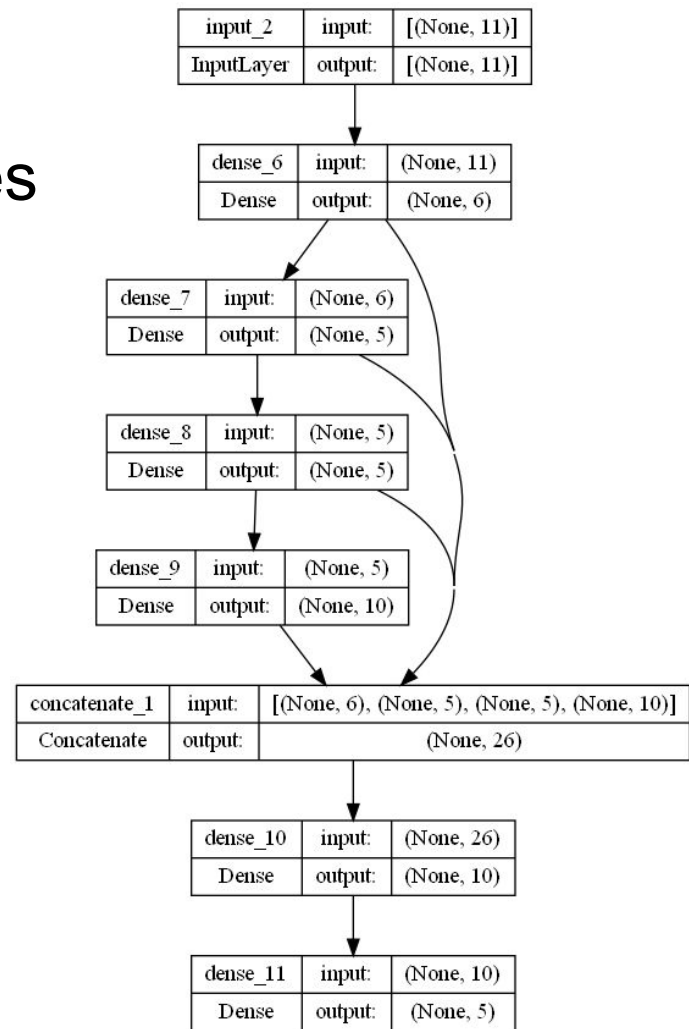

Data Exploration

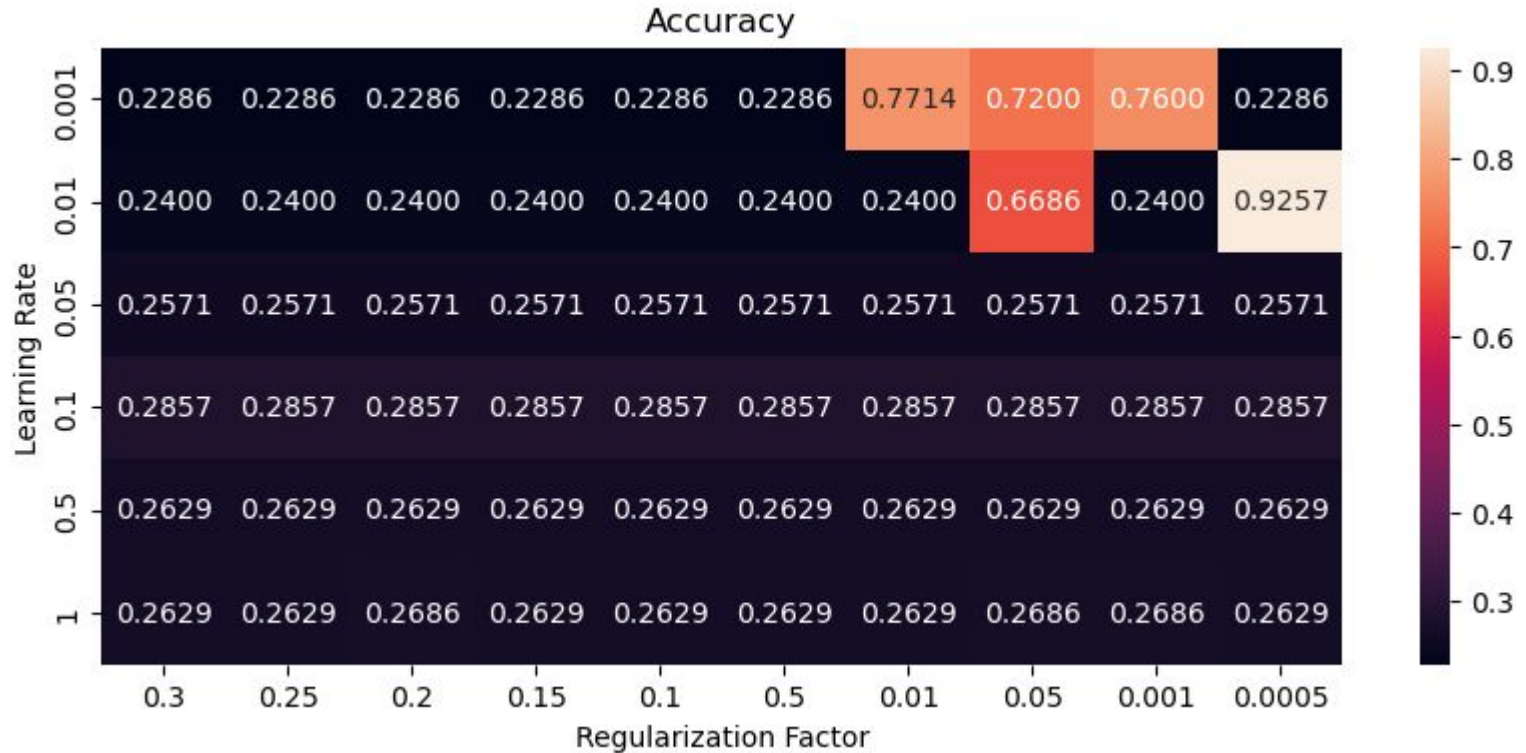

Architecture: unified DNN with multi-level features

Architecture: unified DNN with multi-level features

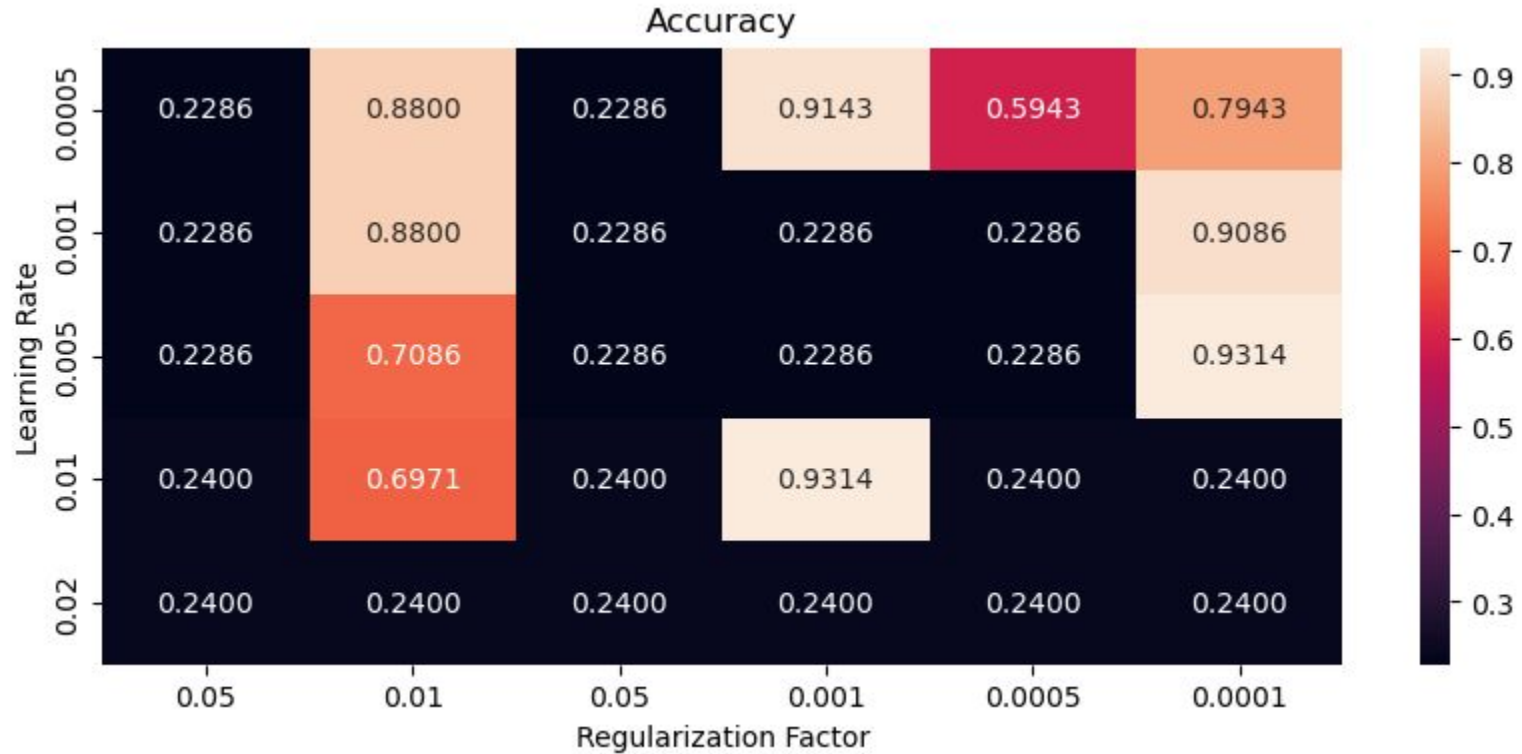

Parameter Tuning

*numerical results are not exactly up to date with final report results

Parameter Tuning

*numerical results are not exactly up to date with final report results

Parameter Tuning

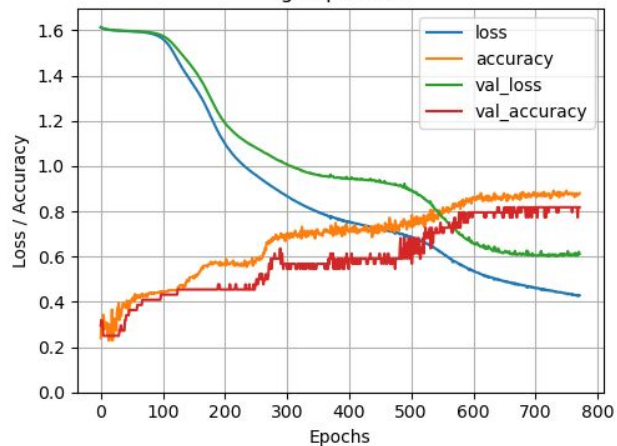

*numerical results are not exactly up to date with final report results

Parameter Tuning

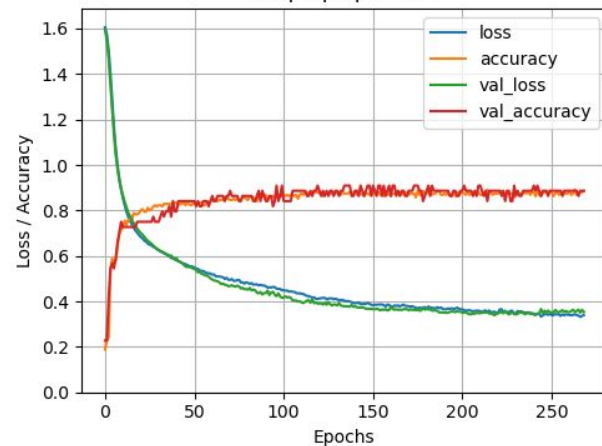

adam optimizer

sgd optimizer

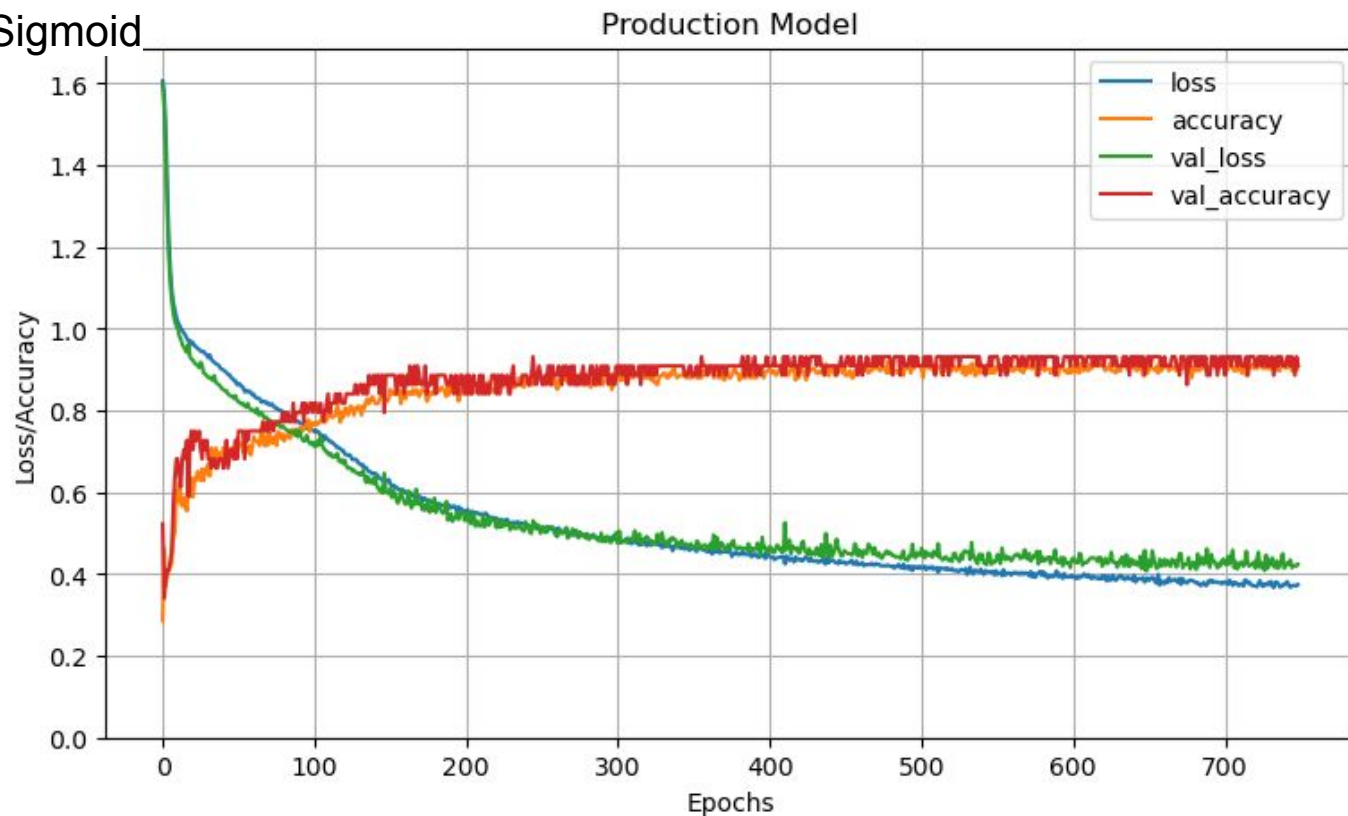

rmsprop optimizer

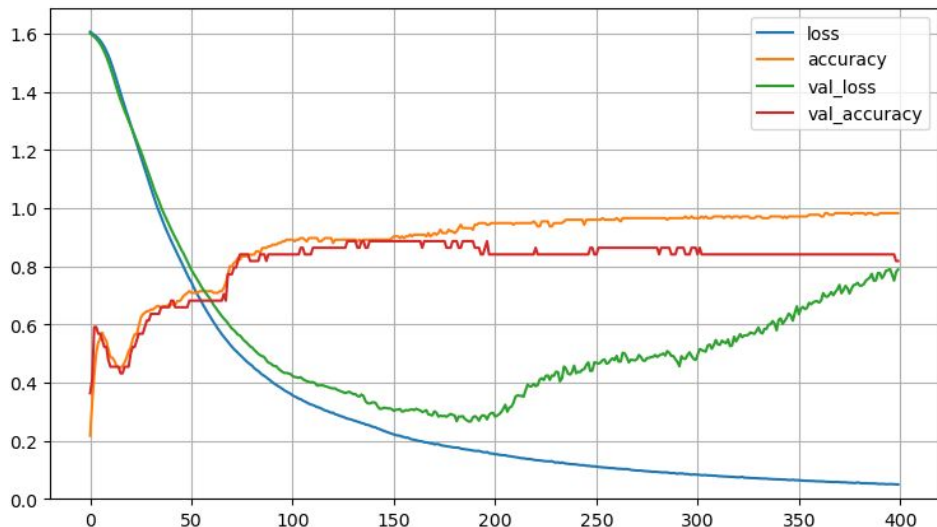

Kernel Initializer = Random Normal
Tensorflow Random Seed = 0
Train Test Split Random State = 42
Hidden Layer Activation = Rectified Linear Unit
Output Layer Activation = Sigmoid

Learning Rate = 0.001
Regularization = 0.01
Optimizer = Adam
Batch Size = 1
Epochs = 1000
Early Stop Patience = 100

Suboptimal Models

No Early Stop

Learning Rate Too High

Confusion Matrix Comparison

*numerical results are not exactly up to date with final report results

Average Accuracy Under 5 Fold Cross Validation (%)					
	Research Paper Normalized Stratified K Fold	Ours - Normalized Data		Ours - Standardized Data	
		K Fold	Stratified K Fold	K Fold	Stratified K Fold
Training	97.95	91.03	92.01	98.06	98.26
Testing	91.36	89.97	91.41	93.80	94.60

Conclusion / Paper Review

Any Unbalanced
Validation?

Learning Rate
Regularization
Loss

Epochs?
Early Stop Patience?
